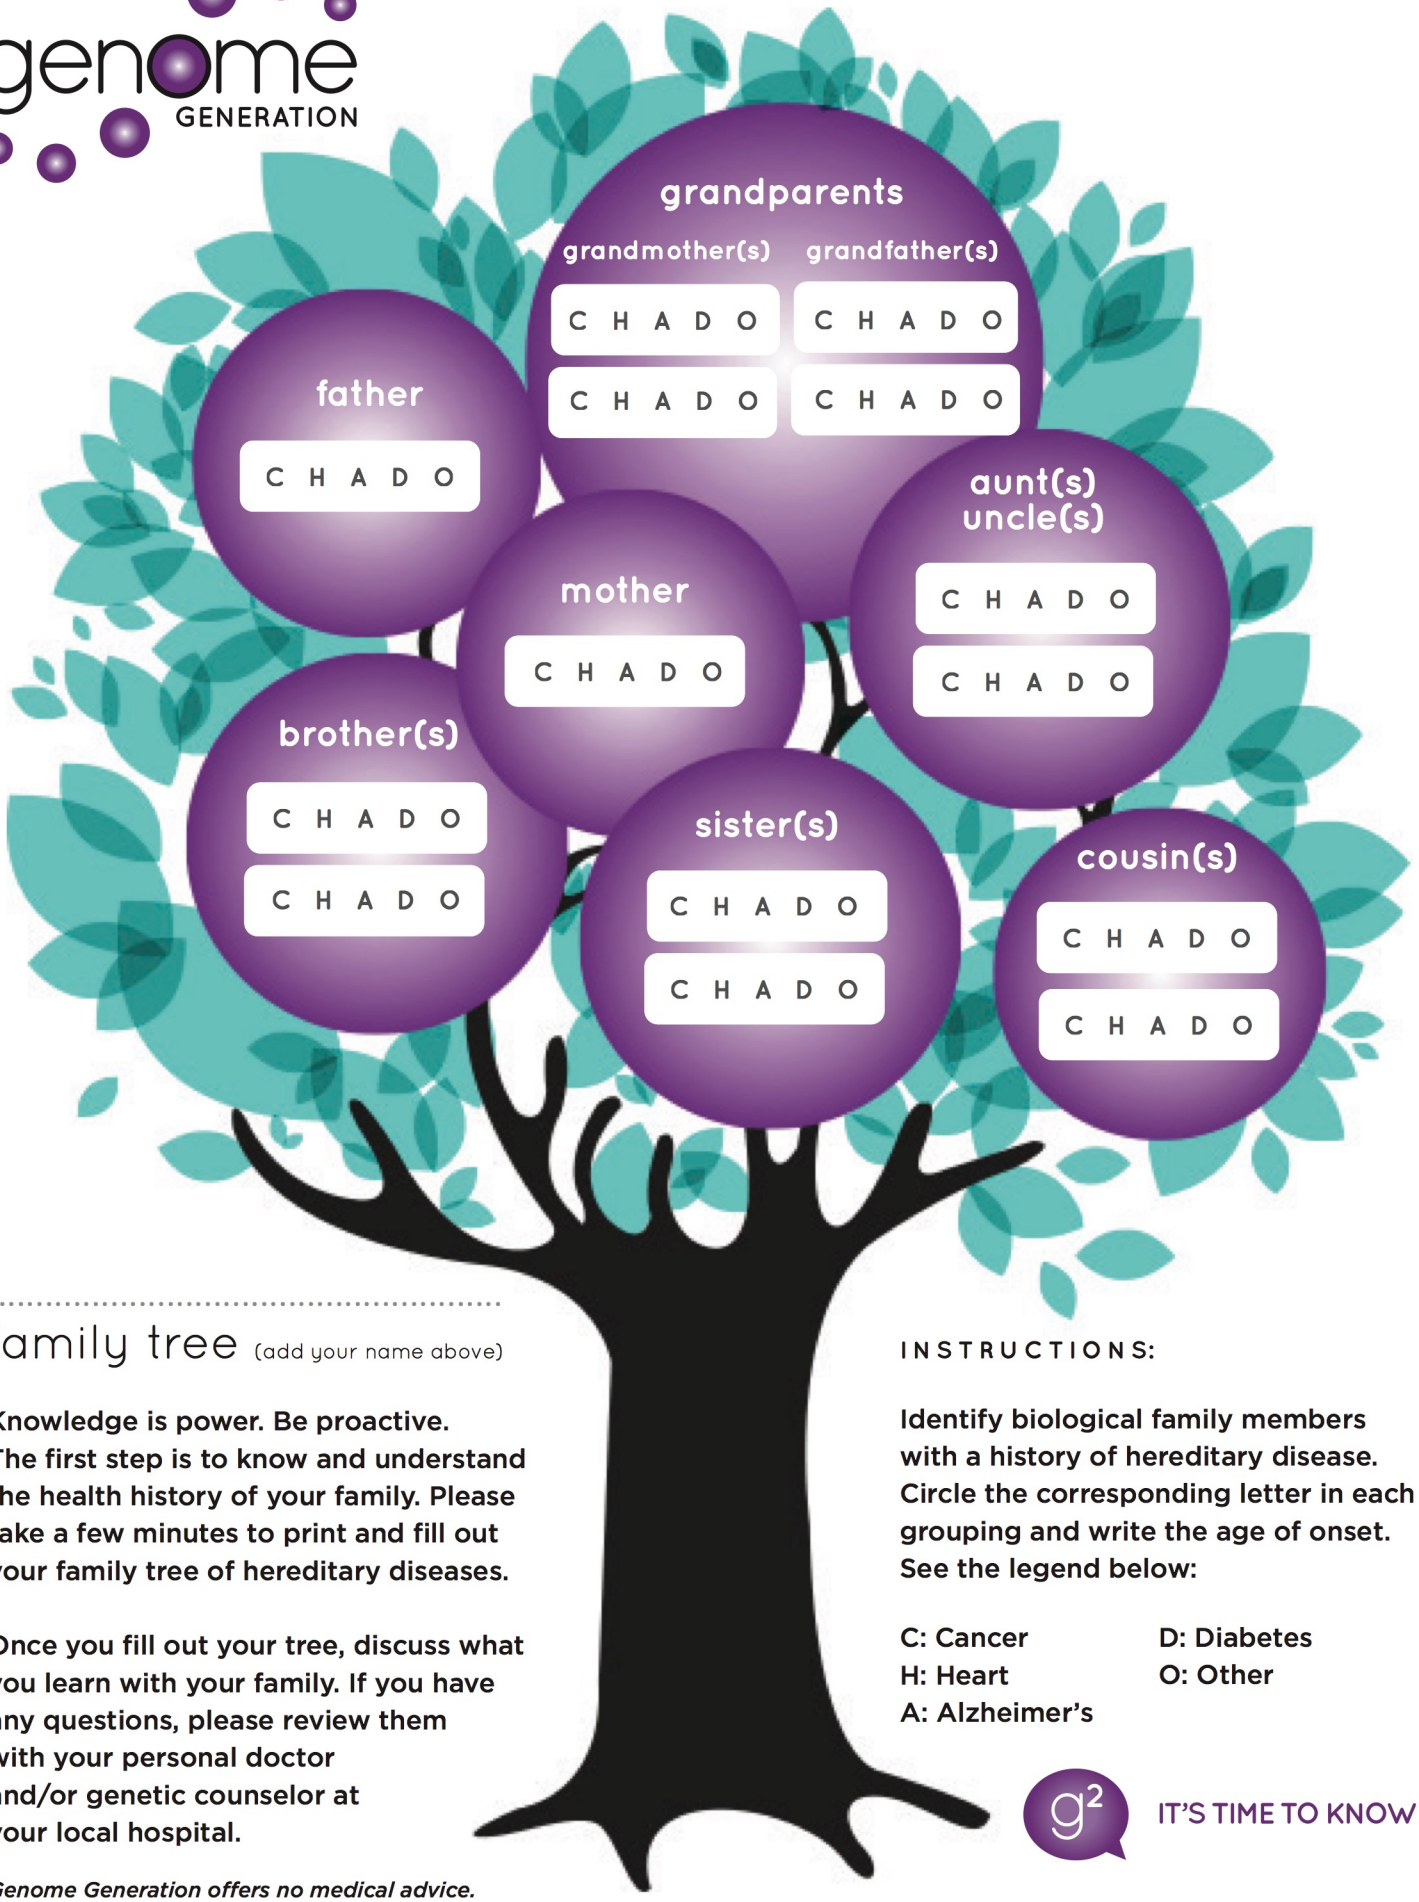
genome GENERATION



family tree (add your name above)

Knowledge is power. Be proactive. The first step is to know and understand the health history of your family. Please take a few minutes to print and fill out your family tree of hereditary diseases.

Once you fill out your tree, discuss what you learn with your family. If you have any questions, please review them with your personal doctor and/or genetic counselor at your local hospital.

Genome Generation offers no medical advice.

INSTRUCTIONS:

Identify biological family members with a history of hereditary disease. Circle the corresponding letter in each grouping and write the age of onset. See the legend below:

C: Cancer
H: Heart
A: Alzheimer's
D: Diabetes
O: Other
